No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                           1 ATGGGTTGGAGCCTCATCTT......CCCTGTCTCCGGGTAAATGA 1437

/lab host="Orden splen" vector: poTB7; Site_1: XhoI; Site_2: EORI; CDNA made by oligo-dT priming. Directionally cloned into EoRIXAhoI sites using the following 5' adaptor: GGCACGAG(G). Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of Callfornia, Berkeley) using ZAP-CDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies). Note: this is a NH MGC Library.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Brams P, Hanna N;

WPI; 1998-286601/25. P-PSDB; AAW63763 Anderson DR, 

New monoclonal antibodies specific for B7.1 or B7.2 antigens and inhibiting binding to CD28 - useful as specific immunosuppressants for treating diseases that involve interactions between T and B for treating assesses .... \_\_\_ cells, e.g. graft rejection or tumours

This sequence encodes a primatized form of the antibody 7B6 heavy chain from macaque. This sequence is used in a method which studies new macaque. This sequence is used in a method which studies new macaque. This sequence is used in a method which studies new match antibodies (MAD be) that bind selectively to B7.1 (CD86) on to B7.2 (CD86) antiquens and inhibite binding of these antiques to CD28. Such MaD's are specific immunosuppressants for treatment of diseases involving T cell/B cell interactions, particularly autoimmune disease, specifically idiopathic thrombocycopaenia purpura, systemic lupus erythematosus, type I diabetes mellitus, rheumatoid arthritis, psoriasis, aplastic anaemia, inflammatory bowel disease, allergy and multiple sclerosis, graft vs. host diseases, B cell lymphoma, infections (including by human immune deficiency virus) or inflammatory disease and tumours. Optionally the NAD can be conjugated to a drug or toxin. MAD's, or their fragments, can also be used as imaging agents and as vaccines or immunogens to develop anti-idiotype reagents. MAD's are optionally combined with other proteins or small molecule immunosuperessants. Blocking B7/CD28 interactions production of interleukin-2 (IL-2), T cell proliferation and suriantigen-specific immunosuppression, i.e. it inhibits antigen-specific immunosuppression and antigen-specific immunosuppression and Example 7; Fig 4b; 87pp; English

```
The present invention relates to a new use of a monoclonal antibody which specifically binds to B7.1 antigen (CD80) and/or B7.2 antigen (CD86) for inducing the apoptosis of B7.4 cells. The invention is useful for treating diseases such as B cell cancer, lymphoma, a cancer where B cells promote the growth and/or metastasis of tumours, B cell lukaemia, and autoimmune diseases such as idiopathic thrombocytopenia purpura, systemic lupus, erythematosus, type I diabetes mellitus, rheumatoid arthritis, psoriasis, aplastic type I diabetes mellitus, rheumatoid arthritis, psoriasis, aplastic or graft-vs-host disease. The antibody is useful for immunosuppression in a human or animal and for treating or preventing resistance to or crejection of transplanted organ or tissue for treating proliferative and hyperproliferative diseases, for treating reversible obstructive airways disease, intestinal inflammations and allergies e.g. Crohn's calways disease, and other types of allergies. The present nucleic acid sequence encodes the heavy chain of T86, a primatised antibody cused in the invention to induce apoptosis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2 DNA sequences (AAT62511 and AAT13847) respectively code for primarised forms (AAW01819) and AAW01820) of the light and heavy chains of cynomolgus monkey anti-human B7.1 antigen monoclonal antibody 786. Cloned 786 light and heavy variable genes are inserted into an expression vector (pref. NEOSPLA) which contains human light and heavy chain constant region genes to allow prodn. of primarised antibody in e.g. CHO cells. Primatised 77c10 and 16C10 anti-B7.1 antibodies have also been produced (see also AAW01817-18 and AAW01821-22). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders and graft-versus-host disease.

enduse b-cell lymphoma model. Thus, the invention is directed to enhancing the immune response of a vertebrate to an antigen or a cytokine by administering in vivo a Flt-3 ligand-encoding polymuclectide such as VR6200, and 1 or more antigen- or cytokine-encoding polymuclectides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CTGGTCACCGTCTCCTCAGCTAGCACCAAGGGCCCATCGGTCTTCCCCCTGGCACCCTCC
